Battle Motors **LNT/Striker, LET2/Raider** **Production start : 2022**	**BEV 240 System Components**

	HIGH VOLTAGE COMPONENTS		HIGH VOLTAGE LITHIUM IRON PHOSPHATE (LiFePo4) BATTERIES		CAB SWITCH DISCONNECT
	CABLE CUT		LOW VOLTAGE BATTERY		HIGH VOLTAGE DISCONNECT
	LIFT POINT		HIGH VOLTAGE POWER CABLE		

Battle Motors

LNT/Striker, LET2/Raider

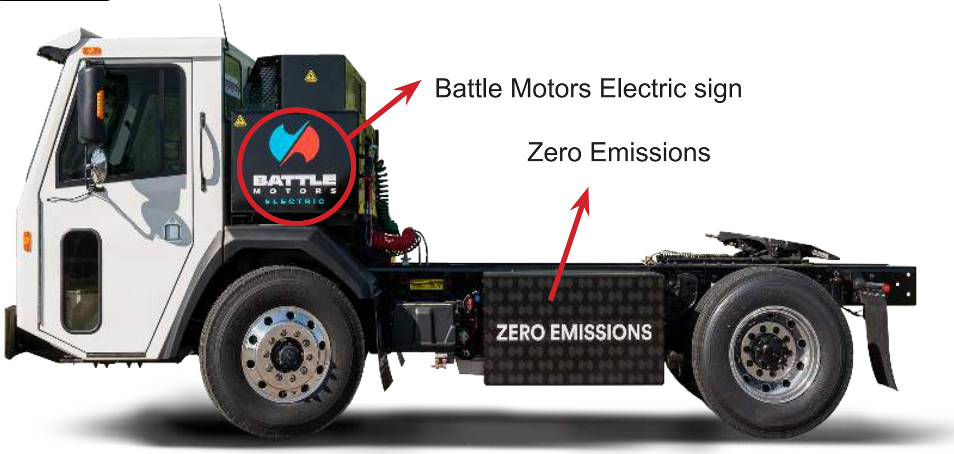
Production start : 2022

BEV 400 System Components

	HIGH VOLTAGE COMPONENTS		HIGH VOLTAGE LITHIUM IRON PHOSPHATE (LiFePo4) BATTERIES		CAB SWITCH DISCONNECT
	CABLE CUT		LOW VOLTAGE BATTERY		HIGH VOLTAGE DISCONNECT
	LIFT POINT		HIGH VOLTAGE POWER CABLE		

1. Identification / recognition

If any damage is present to either high voltage battery box do not touch or come in contact with any portion of the vehicle unless you are protected by the correct high voltage personal protective equipment (HVPPE).

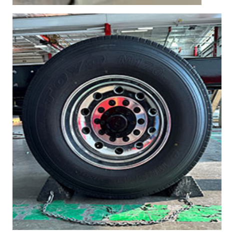


Battery Electric Vehicle

2. Immobilization / stabilization / lifting

This electric vehicle does not have an internal combustion engine. Lack of noise does not mean the vehicle is OFF. Always approach the truck from the sides to stay clear of the potential travel path. Due to the reduced noise of the electric vehicle it could be difficult to determine if the truck is moving or charging.

1. Bring the truck to a complete stop. Pull to apply the parking brake.
2. Position chocks in both the front and back of each wheel.

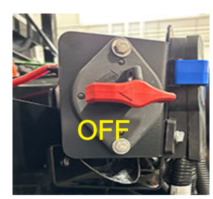


Failing to completely stop the vehicle and apply the parking brake before exiting the cab can cause pinching or crushing. Do not exit the vehicle without first applying the parking brake.

3. Disable direct hazards / safety regulations

- When shutting down the high voltage system wait at least fifteen minutes for the complete discharge of high voltage capacitors.
- HV system shutdown procedure is designed to disable the vehicles HV system, not to discharge the High Voltage (HV) battery. **THE BATTERY WILL REMAIN ENERGIZED.**
- After performing any HV shutdown procedure to disable the HV system, never assume the system is no longer energized. Always use appropriate HVPPE and verify de-energization with a multimeter.

Use the following procedures to disable the High Voltage Energy in an emergency situation.



1. If the vehicle is on (ignition key is in RUN position), turn the ignition key counterclockwise to OFF position (vertical to horizon) and remove the key.
2. Turn the Master Disconnect (Kill Switch) counterclockwise to the OFF position (horizontal to horizon).

NOTE: All the components are designed to discharge their own capacitance within 5 (five) minutes.

4. Access to the occupants

Note: The ignition key and the door key are separate keys. The key to the door is small and silver with a rounded top. The ignition key has a square top and is covered in black plastic.

Ignition key

Cab door key

Two exit doors, one on each side.

5. Stored energy / liquids / gases / solids

 Low-Voltage Battery	 Flammable	 Corrosives	 Health Hazards	
 High-Voltage Battery	 Hi-Voltage Warning	 Flammable	 Corrosives	 Health Hazards

6. In case of fire

Always wear appropriate Personal Protective Equipment (PPE) including high voltage, Class 0 (1000V) rubber insulated safety gloves and self-contained breathing apparatus (SCBA).

	Use water to extinguish Li-ion fires		Gases emitted from battery pack are toxic
	Potential for eye, nose and throat irritation		Potential for battery re-ignition. Check battery pack temperature using a thermal infrared camera.

7. In case of submersion

Vehicle Immersion scenario: Pay attention to the following items if the vehicle is accidentally immersed in water,
1. Do not turn on the power supply. Follow section 3 to disable direct hazards.
2. Have vehicle towed to an authorized Battle Motors dealer for inspection and repair.

8. Towing / transportation / storage

Before towing the truck, it is mandatory to disconnect the drive shaft from the wheels.

Warning signs of hazardous damage: Sparks, smoke, increasing temperature gurgling/bubbling sounds from high voltage battery. If any of these signs are observed, ventilate the vehicle immediately and park away from other structures and vehicles. The high voltage battery may be giving off harmful/flammable gases and may become a delayed fire hazard.

The electric motors can produce electricity when moving the truck with the rear drive tire on the ground. This remains a potential source of electric shock even when the high voltage system is disabled. Do not touch the truck when it is in motion.

9. Important additional information

Never cut orange high voltage cables. Always assume the orange cable is energized.
Never touch damaged or submerged high voltage cables or components.
Always wear appropriate Personal Protective Equipment (PPE) including high voltage, Class 0 (1000V) rubber insulated safety gloves and self-contained breathing apparatus (SCBA).
Do not perform any operation on a damaged truck without appropriate HVPPE.

10. Explanation of pictograms used

	Electric Vehicle		Low-voltage battery
	High-voltage component		Cable cut
	Lithium Iron Phosphate batteries		Disconnect high-voltage device
	High-voltage power cables		General warning sign
	Warning, Electricity		Corrosives
	Flammable		Health hazards
	Use water to extinguish Li-ion fires		Potential for battery re-ignition. Check battery pack temperature using a thermal infrared camera.
	Risk of acute toxicity		Lift points
