

Emergency Response Guide

VOLCON STAG
4 Door UTV
2023-2025

	High Strength Zone		High Voltage Battery		Low Voltage Battery
	Gas Strut/ Preloaded Spring		High Voltage Cable		Low Voltage Cable
			High Voltage Disconnect		

VOLCON STAG
4 Door UTV
2023-2025

The Volcon Stag contains a high voltage battery and a low voltage battery. The high voltage system must be disabled prior to occupant rescue by disconnecting the low voltage battery.

PERFORM HIGH VOLTAGE DISABLE:

- 1. Power OFF the vehicle by pressing the power button on the center console for 3 seconds.
- 2. Double cut the low voltage cable marked by the orange/yellow tape or pull the Fireman’s Loop connector.
 - i. The Fireman’s Loop is located at the rear of the vehicle, centered under the cargo area below the low voltage battery.

⚠ WARNING:

- 1. DO NOT CUT ANY ORANGE HIGH VOLTAGE CABLES.
- 2. DO NOT USE THE HIGH VOLTAGE BATTERY OR ANY OTHER HIGH VOLTAGE COMPONENT TO LIFT OR STABILIZE THE VEHICLE.

STORED ENERGY:

150 - 250V						
12V						

IN CASE OF FIRE

FIREFIGHTING

Use water to fight a high voltage battery fire. Do not use an ABC dry chemical extinguisher because it will not extinguish a lithium-ion battery fire. The battery will not explode when it is on fire, but the gas strut may. Battery cells will vent heated gas and toxic vapors, as well as flammable electrolyte once they get very hot. Use as much water as needed to cool the battery and extinguish the fire. Do not submerge the vehicle to extinguish the fire. It can take 3,000-8,000 gallons of water applied directly to fully extinguish the fire and can take up to 24 hours for the battery to fully cool. Volcon recommends responders protect themselves with full PPE when conducting a rescue, including taking appropriate steps to protect bystanders downwind.

 **WARNING: POSSIBILITY OF BATTERY FIRE RE-IGNITION.**

IN CASE OF WATER SUBMERSION

The high voltage battery is isolated from the metal vehicle chassis, and therefore, does not present a greater risk of shock if submerged in water, however, Volcon recommends you wear the appropriate PPE when performing a water rescue.
