Text

Background:

The information is produced to aid rescue personnel at the scene of an accident.
Most rescue organizations do not have access to VIDA.
A decision to distribute the information by SPJ was taken at the TSF meeting 07w08.

Attached you find the new Rescue Information in most languages as a pdf-file.
More detailed information can be found at www.moditech.com, where interactive rescue documents are available, or contact the local Moditech supplier for further information.

Safety information

This document contains information about and location of the different types of stored energy (for example. pyrotechnical, fuel, and electric voltage). All emergency services personnel should be familiar with this document to avoid accidental activation or ignition during rescue actions. The information is not exact, it shall be regarded as general. The information shown applies to left-hand drive vehicles. On right-hand drive vehicles, certain parts may have reversed positions.

Warning! For emergency services personnel: Disconnect the battery and wait at least 30 seconds before starting work on the vehicle. This is to prevent inadvertent activation of pyrotechnical SRS components.

Note! For emergency service personnel: Applies to vehicles with electrical drivelines: Only disconnect the 12-volt battery, this also disconnects the high voltage system.

Note! Do not touch high-voltage components.
