1. Identification / recognition

The electric motor is silent. The display on the left of the instrument cluster (power meter) indicates whether the electric drive is switched “OFF” or “READY” for operation.

2. Immobilisation / stabilisation / lifting

Immobilise the vehicle

Press the Park button “P” and apply the parking brake.

Lifting points

 Suitable lifting points

 High voltage battery

3. Disable direct hazards / safety regulations

Turn off the ignition (power meter display “OFF”)

Press the START-STOP button without depressing the brake pedal

A key card or a smartphone app can also be used instead of a remote control key.

Deactivate the high voltage system

Option 1: Separation point in engine compartment

① Pull out red tab

② Pull out black connector

Option 2: Fuse in boot

Remove the cover on the left-hand side and pull out the fuse.

Do not touch, cut or open high voltage components or the high-voltage battery. Wear suitable safety equipment.

In the event of an accident in which the airbags are deployed, the high-voltage system will be automatically deactivated. The high-voltage system is de-energised approx. 20 seconds after deactivation.

Disconnect the 12-volt battery (in the boot)

Remove the cover

Disconnect the negative terminal

Separate from charging station (emergency release)

Remove the cover

Release the yellow loop from the retainer and pull it

Disconnect the charging connector

4. Access to the occupants

Glass types:

- ① Composite safety glass
- ② Single-layer safety glass
- ③ Side windows, optional Composite safety glass

5. Stored energy / liquids / gases / solids

There is a risk of a thermal reaction in the high-voltage battery if coolant escapes from the battery cooling system.
Monitor the temperature of the high-voltage battery.

6. In case of fire

Lithium-ion batteries can self-ignite spontaneously or after a delay in the event of damage or incorrect use, and can re-ignite after a fire has been suppressed.
Wear suitable safety equipment.

7. In case of submersion

After recovering the vehicle from the water, deactivate the high-voltage system (see Section 3) and allow the water to drain off. Wear suitable safety equipment.

8. Towing / transportation / storage

Lithium-ion batteries can self-ignite, or reignite after the fire has been extinguished.

If the vehicle has been involved in an accident or if the HV battery is damaged or suspicious:
Deactivate the high-voltage system (see Section 3). Park the vehicle at a safe distance from buildings and other vehicles (quarantine area).

Do not tow a vehicle that has been involved in an accident on its drive axles.
